1978

Principal facts for gravity stations in the
Hamilton 2° quadrangle, Montana and Idaho

by

Dolores M. Wilson

Introduction

A gravity survey was made of an area in the Hamilton 2° sheet, Montana (fig. 1), to provide information on structural relationships and subsurface geology as part of regional geophysical studies in northwestern Montana.

Data Collection

During the summer of 1974, 135 stations were established using a LaCoste and Romberg gravity meter G-131.^{1/} The stations were referenced to the International Gravity Standardization Net 1971 (Defense Mapping Agency Aerospace Center, 1974) at base station ACIC 0442-0 at Missoula, Montana. Secondary base stations were established in the field area at Superior and Lolo Work Center, Montana. Descriptions of the base stations are included at the end of this paper.

Station elevations were obtained from benchmarks, spot elevations, and contour interpolations on U.S. Geological Survey topographic maps at 1:24,000 and 1:62,500 scales. Elevations are accurate to 1-2 m in areas of low relief, but may be in error by 5-10 m in more rugged terrain. The resultant error in the Bouguer anomaly is less than 2 mGal (milligals).

^{1/} Use of brand names in this report is for descriptive purposes only and in no way constitutes endorsement by the U.S. Geological Survey.

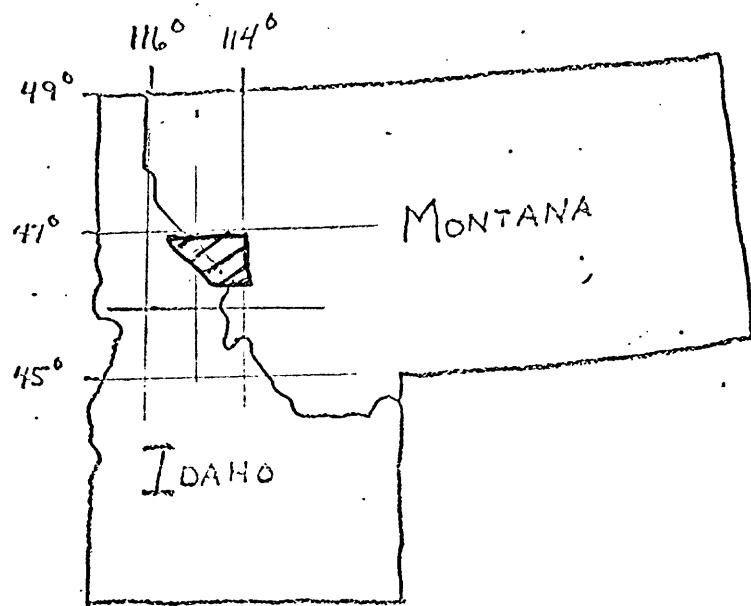

Figure 1.--Area of gravity survey (patterned) in Hamilton 2° quadrangle, Montana and Idaho.

Data Reduction

The gravity data were reduced by means of a digital computer program written by G. I. Evenden and R. R. Wahl. Gravity meter readings were converted to observed gravity using the 1971 base values of the International Gravity Standardization Net. The Geodetic Reference System, 1967 formula (International Association of Geodesy, 1967), was used to compute theoretical gravity. The data were reduced to Bouguer anomaly values using an assumed average rock density of 2.67 g/cm³. Terrain corrections were made by hand template through Zone H of Hammer (1939) and to 167 km by digital computer. The corrections ranged from 1.03 mGal 8 km northeast of Missoula to 22.48 mGal at the confluence of Joan Creek and Kelley Creek. Corrections were made for tidal effect and linear instrument drift. The principal facts for the gravity stations are listed in table 1.

Explanations of headings on table 1:

sta. no.	Gravity station number.
latitude	North latitude in degrees, minutes, and hundredths of minutes.
longitude	West longitude in degrees, minutes, and hundredths of minutes.
elev, f	Elevation in feet (to convert to meters, multiply by 0.3048).
st	State where station is located (Montana).
observed gravity	Observed gravity in milligals.
standard gravity	Theoretical gravity in milligals.
fr.-air correction	Free-air correction in milligals.

bouguer correction	Elevation and curvature correction in milligals.
terrain correction	Terrain correction in milligals.
fr.-air anomaly	Free-air anomaly in milligals.
bouguer anomaly	Bouguer anomaly in milligals for assumed average density of 2.67 g/cm ³ .

GRAVITY BASE STATION

LATITUDE 46° 55.00' N	(1)	STATION DESIGNATION MISSOULA
LONGITUDE 111° 06.50' W	(1)	COUNTRY/STATE USA/Montana
ELEVATION 976.3 METERS (1)		ADOPTED GRAVITY VALUE $g = 980.429,45$ mgals
REFERENCE CODE NUMBERS ACIC 0442-0 IGC 156QJ WA 127		ESTIMATED ACCURACY ± 0.1 mgals
		DATE MONTH/YEAR

DESCRIPTION AND/OR SKETCH

Station is located at the Missoula Airport, inside the lobby, on the tile floor, 0.3 m west of the exit to the apron and aircraft. (1)
